Lignomat Sensors App - Getting Started

Guide Version 4 | Windows 11 / Windows 10 (64-bit) | Google Chrome

Use this guide to download the Windows installer, respond to the prompts you may see, and open Lignomat Sensors for the first time. You will need administrator permission to install the app and its included BL2 USB driver.

> **Installation overview:**
>
> 1. Choose the guide for the browser you use. This guide is for **Google Chrome**.
> 2. Download the installer and allow the download if prompted.
> 3. Allow Windows to open the file and install the app.
>
> Some warnings may not appear, depending on your settings and browser version. If a pictured warning does not appear, continue to the next applicable instruction.

> **Before you continue:** Only keep or run an installer you intentionally downloaded from the Lignomat download page linked below. If the source or file name is unexpected, cancel and contact Lignomat. Do not turn off browser or Windows security protection.

Google Chrome: download the Windows installer

1. Open the download page and choose Windows

In Google Chrome, go to https://mdpdx.github.io/lignomat-sensors-releases/. Under **Windows**, click the blue **Download** button for the available version.

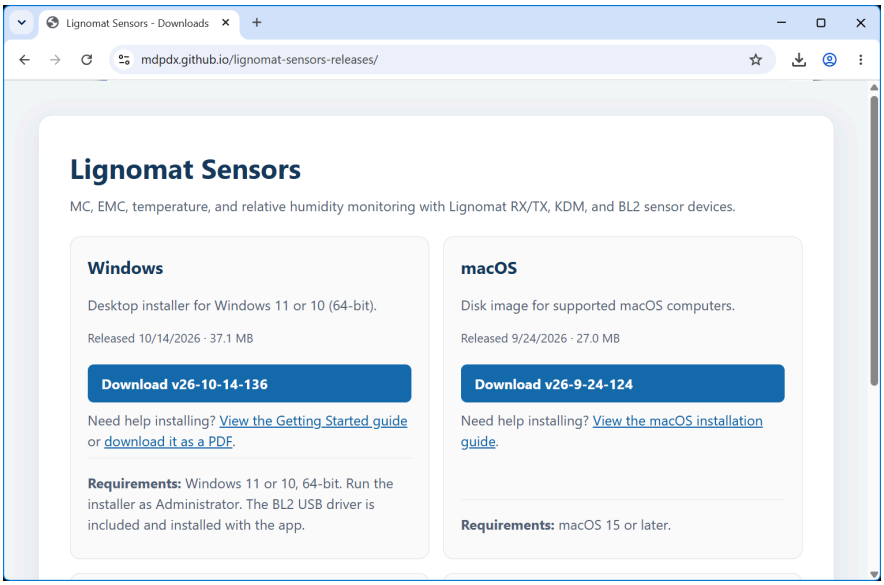

Figure 1. The Windows download in Chrome. Screenshots throughout this guide are representative examples, not a statement of the latest release. Version numbers, release dates, and file sizes may differ; download the current version offered on the download page.

Google Chrome: open the downloaded installer

2. Wait for the download to finish

Chrome may show a completion popup below its download arrow near the top-right corner. Wait until the installer entry says **Done**.

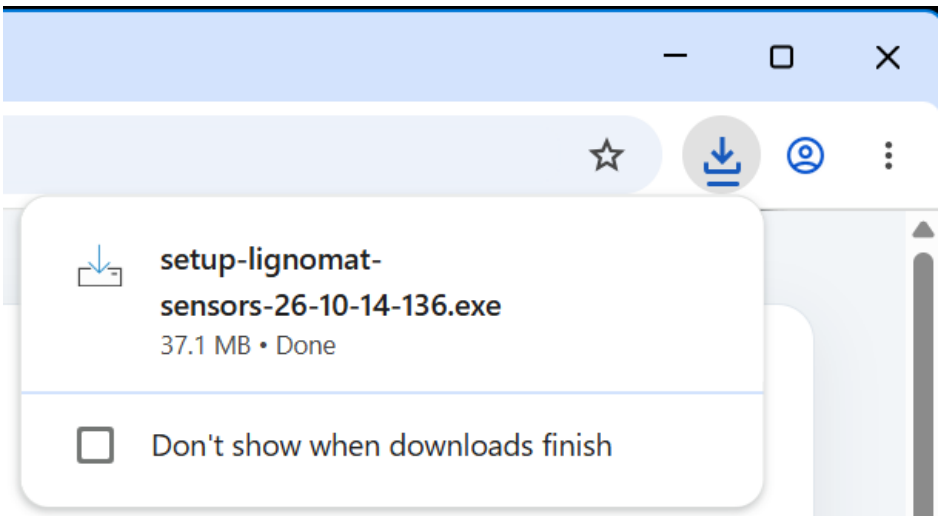

Figure 2. Chrome's completed download. The arrow above the popup opens the download history.

No Chrome download warning is shown in this captured path. Chrome may show different warnings on another computer or release. If it blocks the file, review the source and message before proceeding; do not turn off Safe Browsing. Windows SmartScreen, shown later, is separate from Chrome's download checks.

3. Open the completed installer

Click Chrome's **Downloads** arrow to open **Recent download history**, then click the completed installer's file name to open it. The folder icon beside the entry lets you locate the file in Windows if you prefer to double-click it there.

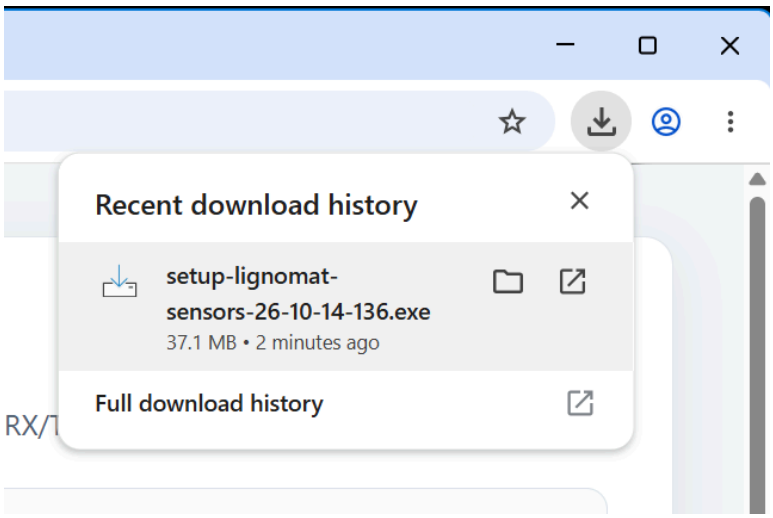

Figure 3. Open the installer from Chrome's recent download history, or locate it using the folder icon.

Continue with the Windows steps below. You do not need to download the installer again.

Windows: review SmartScreen if it appears

Windows 1. Select More info

If Windows displays **Windows protected your PC**, Microsoft Defender SmartScreen has paused an unrecognized app. This is a Windows prompt, not an Edge or Chrome download popup. Click **More info** to review the app details.

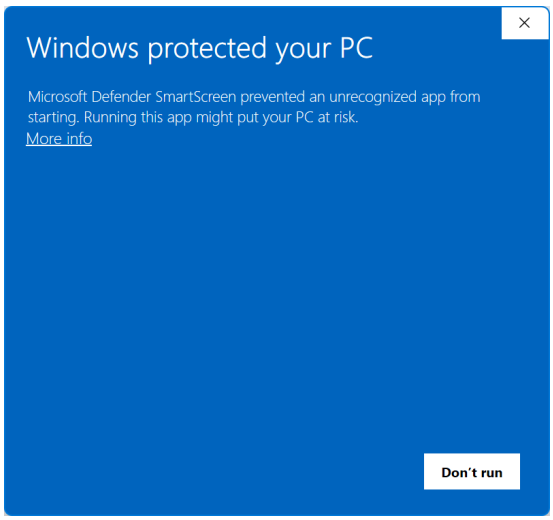

Figure 4. The initial Windows SmartScreen prompt. If this screen does not appear, continue to Windows permission.

Windows 2. Review the app, then choose Run anyway if trusted

Check that the **App** name matches the installer you downloaded. **Unknown publisher** does not establish that a file is safe. Choose **Run anyway** only for your intended, trusted download; otherwise choose **Don't run**. If Run anyway is unavailable, ask your IT administrator for help.

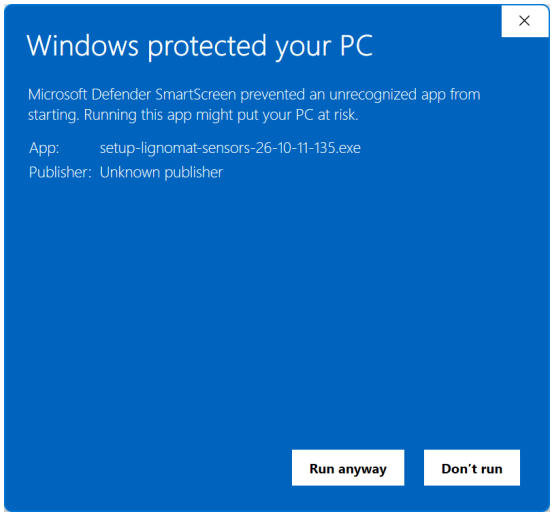

Figure 5. Expanded SmartScreen details and the Run anyway button. Compare the app name with the installer you downloaded; its version number may differ from this example.

Windows: approve installation permission

Windows 3. Approve User Account Control (UAC)

Windows may ask, **“Do you want to allow this app from an unknown publisher to make changes to your device?”** Check the installer name again, then click **Yes** only if this is the download you intended to run. A standard user account may need an administrator to enter credentials.

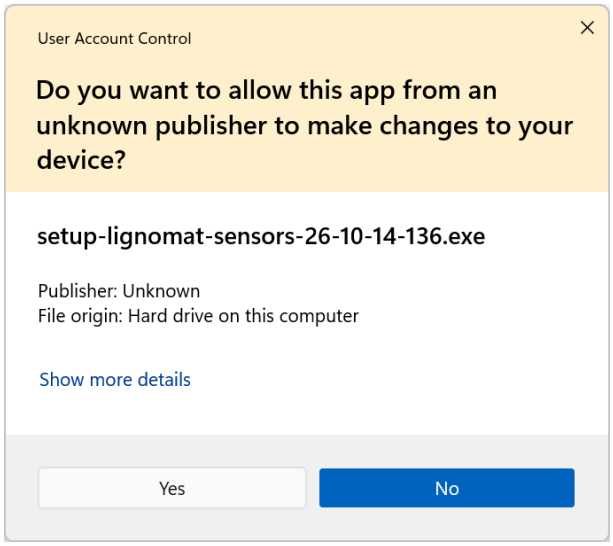

Figure 6. Windows permission for the installer. This prompt can follow either browser's download path; the desktop background may dim depending on your Windows settings.

Windows 4. Start the manual installation

When you run the installer manually, it shows **Ready to Install**. Click **Install** to begin. This is different from an update started inside the app: the app runs the same installer in silent mode, skipping the wizard pages and showing installation progress instead. Windows permission or installation errors may still require your attention.

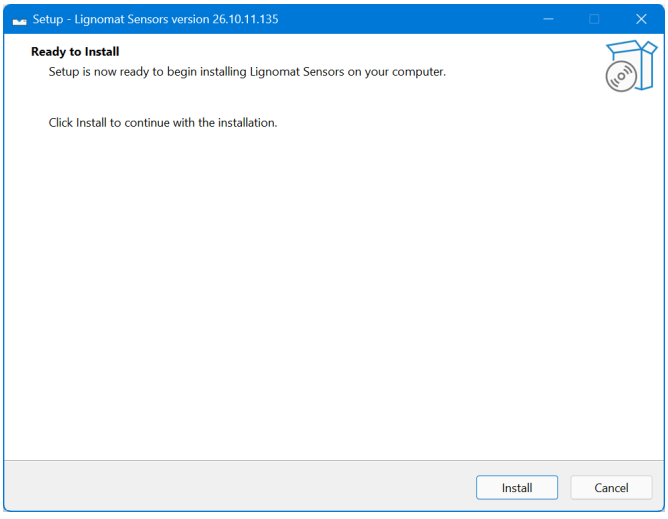

Figure 7. Ready to Install and the Install button during a manual installation.

Install Lignomat Sensors

Windows 5. Allow setup to prepare

Setup may briefly display **Preparing to Install**. Leave the window open while it prepares the installation. This screen may pass quickly before the progress bar appears.

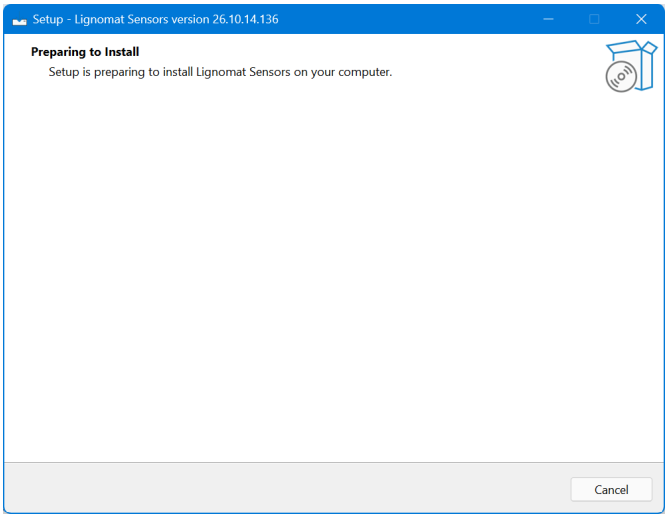

Figure 8. Setup preparing the installation.

Windows 6. Wait while setup installs the app

Leave the setup window open while the progress bar moves. Setup copies the application files and installs the included BL2 USB driver. Avoid clicking **Cancel** unless you intend to stop installation.

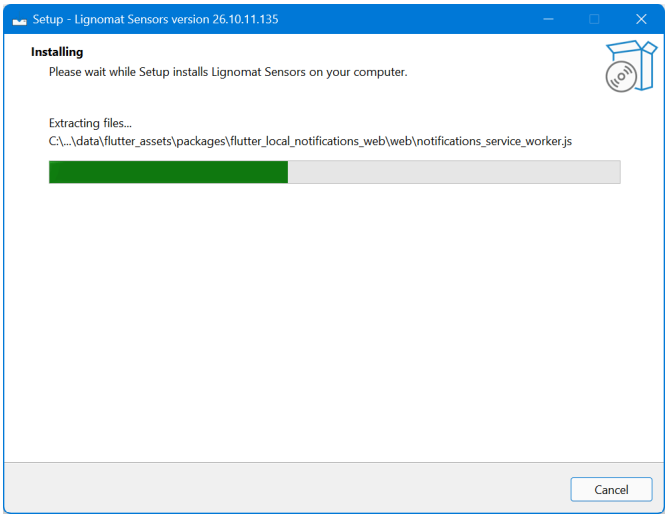

Figure 9. Installation in progress. The file name and progress shown will change as setup runs.

When installation succeeds, setup closes and launches **Lignomat Sensors**. It also creates a desktop shortcut and a Start menu entry so you can open the app later.

First launch: find your devices

Windows 7. Choose how to connect your Lignomat devices

On a first run, the app may show a **Find Lignomat Devices** dialog. Before scanning, make sure your RX or KDM equipment is plugged into the computer and powered on.

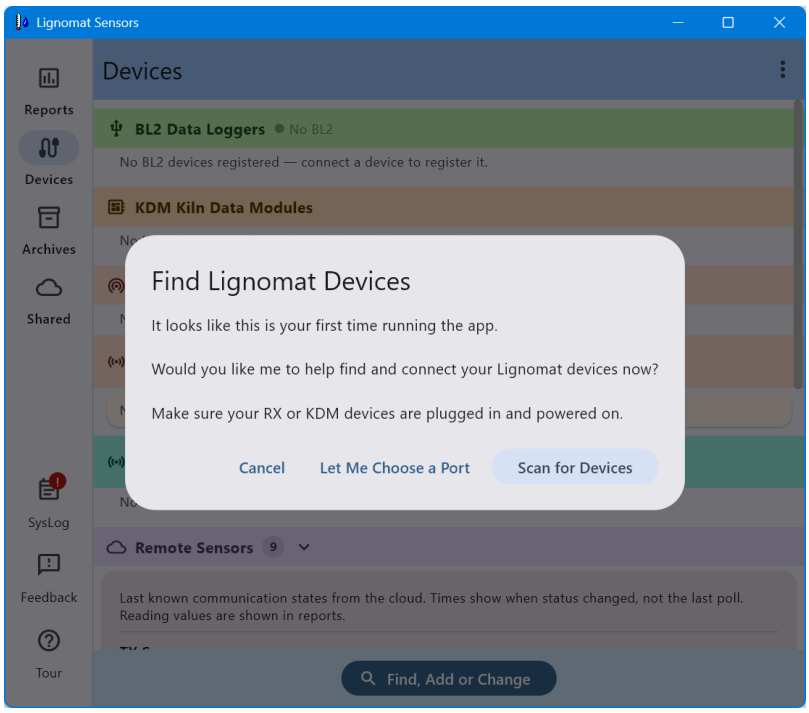

Figure 10. The windowed first-run device discovery dialog. The background device list reflects the computer used for this capture; your own list may be different.

- **Scan for Devices:** Let the app help find connected equipment.
- **Let Me Choose a Port:** Choose the connection port yourself if you already know which one to use.
- **Cancel:** Dismiss the dialog if you are not ready to connect devices. You can return to the **Devices** page and use **Find, Add or Change** later.

If you need help

If installation fails or the app does not open, note the exact message, installer version, and step where it stopped. Contact Lignomat through https://lignomatusa.com/. For administrator permissions or organization-managed security blocks, contact your IT administrator.

About these screenshots: Guide Version 4 is the document revision, not the application version. The same instructions apply while the pictured controls and workflow remain unchanged. You do not need to match the version numbers in the pictures.

Print or save as PDF: use Letter paper, portrait orientation, 100% scale, and turn off browser headers and footers. The guide sets 0.6-inch print margins. Enable background graphics if you want the shaded notes. Screenshots are local files; keep this HTML beside the `edge browser download screenshots` and `chrome browser app download screenshots` folders when moving it or publishing it. The PDF can be shared on its own.
