

Lignomat Sensors App - Getting Started Version 2

1. Download the Installer: Bypassing the browser warning.

Browsers like Google Chrome often flag newly released software as an "uncommon download" simply because it hasn't been downloaded by thousands of people yet.

- Click the **Downloads** icon at the top right of your browser window.
- If you see a warning that the file is "not commonly downloaded" or "suspicious," hover over the blocked file and click the **three dots** (or right-click).
- Select **Keep**.
- If a red warning page appears, click **Continue anyway** to finalize the download.

2. Launch the Setup File: Clearing Microsoft Defender SmartScreen.

When you double-click the downloaded setup file, Windows may intercept it with a blue "Windows protected your PC" screen. This is Microsoft Defender SmartScreen pausing an app it hasn't seen before.

- Click the **More info** link located just under the main text.
- Verify the app name, then click the **Run anyway** button that appears at the bottom of the window.

3. Authorize the Installation: User Account Control (UAC).

Before the installation can begin, Windows requires administrative permission to let the app write files to your hard drive and create shortcuts.

- A prompt will appear asking: *"Do you want to allow this app to make changes to your device?"*
- Click **Yes**. The installation wizard will now open and guide you through the rest of the setup.

Below are standard visual samples of the exact warning menus, download popups, SmartScreen overlays, and UAC elevation prompts for Windows 11, Windows 10, Edge, and Chrome.

Browser Security Warnings

1. Microsoft Edge Download Flyout

When downloading an un-reputed executable in Microsoft Edge, a top-right flyout popup blocks execution.

2. Google Chrome Download Warning Screen

Chromium flags uncommon .exe downloads and requires users to explicitly expand options or visit `chrome://downloads` to click **Continue anyway**.

Windows Defender SmartScreen Prompts

3. Windows 11 SmartScreen Dialog

Windows 11 displays a centered blue card with rounded UI corners and dark acrylic background blur. Clicking **More info** reveals the **Run anyway** button.

4. Windows 10 SmartScreen: Unsigned App Example

These direct Windows 10 screenshots show the SmartScreen warning and its **More info** flow. The same warning may appear before launching a downloaded installer that is unsigned, unrecognized, or has not built a reputation. These examples show the security prompt, not the Lignomat setup wizard; wording and displayed details can vary by Windows version.

Step 1: Initial warning

Windows protected your PC appears, with **More info** available to reveal the publisher and app details.

Source: IT Support Guides - Windows Defender SmartScreen prevented an unrecognized app · **Image dimensions:** 640 × 600 px

Step 2: Find the More info link

The source's annotated screenshot points to **More info**. Click it to see the app name, publisher, and the option to continue.

Source: IT Support Guides - Windows Defender SmartScreen prevented an unrecognized app · **Image dimensions:** 641 × 600 px

Step 3: Review the publisher and choose Run anyway

After **More info**, Windows shows the file name and publisher. Continue only if you trust the download and have verified it came from Lignomat.
